## 1 Installation

# Installing prerequisites

## Dependencies

- JEWEL needs **LHAPDF5** to provide the PDF's. Install LHAPDF following the instructions on the LHAPDF web page and download the PDF sets you want to use. Please note that you will need the fortran version of LHAPDF, that is version 5 (and not the new version 6). In its default setup JEWEL needs the CTEQ6L1 (number 10042) and EPS09LOR\_208 sets. The latter can be downloaded from the **EPS09 web page**.
- The provided Makefile assumes that JEWEL will be compiled with `gfortran`. People who wish to use a different compiler have to modify the Makefile accordingly.

## Download and Install LHAPDF5
